Sharing Life Experiences

Adaptability & Flexibility in Software Development

David Alejandro Meyer Romero

ADS0 | Ficha: 3336113 | CEFR Level B1.1

01. The Workplace Challenge

Analyzing a real-life situation where flexibility was required to overcome a process change.

THE INITIAL SITUATION

Project Phase

Middle of the Sprint. The team was developing a large-scale Relational Database system.

The Problem

Unexpected change in client requirements. Urgent shift to NoSQL architecture needed.

ACTION & ADAPTABILITY

Mandatory Actions

- ✓ We **had to schedule** emergency sessions.
- ✓ Developers **must adapt** to NoSQL environments.
- ✓ We **should analyze** new data patterns first.

Flexibility was the key to preventing project failure.

FINAL OUTCOMES

100%
SUCCESSFUL DELIVERY

What was the result?

The software was deployed on time. We improved our response capacity and technical skills.

Future Improvements

Engineers **should establish** strict boundaries, but they **have to embrace** change.
